PRODUCT INFORMATION

Antigen Description	XRCC5 (X-ray repair complementing defective repair in Chinese hamster cells 5 (double-strand-break rejoicing)) is a protein-coding gene. Diseases associated with XRCC5 include tinea capitis, and dna ligase iv deficiency, and among its related super-pathways are Non-homologous end joining and Integration of provirus. GO annotations related to this gene include transcription regulatory region DNA binding and ubiquitin protein ligase binding.
