This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Product Overview	Polyclonal antibody to human Bone Sialoprotein (aa 201-211)
Antigen Description	The protein encoded by this gene is a major structural protein of the bone matrix. It constitutes approximately 12% of the noncollagenous proteins in human bone and is synthesized by skeletal-associated cell types, including hypertrophic chondrocytes, osteoblasts, osteocytes, and osteoclasts. The only extraskeletal site of its synthesis is the trophoblast. This protein binds to calcium and hydroxyapatite via its acidic amino acid clusters, and mediates cell attachment through an RGD sequence that recognizes the vitronectin receptor
Specificity	Human Bone Sialoprotein (aa 201-211). Cross reactivity with human Bone Sialoprotein
Immunogen	Synthetic human Bone Sialoprotein (aa 201-211) ((Y)TGGQGKGTSKT)
Isotype	IgG
Source/Host	Rabbit
