## PRODUCT INFORMATION

<b>Antigen Description</b>	The galectins constitute a large family of carbohydrate-binding proteins that function in many systems both intracellularly and following secretion. Galectins contain either one or two carbohydrate recognition domains (CRR) which mediate recognition of N-acetyl-lactosamine-containing glycoproteins. Some galectins exist in multiple isoforms due to alternative splicing. Individual galectins differ in their tissue distribution and in their carbohydrate-binding specificities.
<b>Specificity</b>	Detects mouse Galectin-3 in ELISAs and Western blots. In sandwich ELISAs, approximately 10% cross-reactivity with recombinant human (rh)Galectin-3 is observed and less than 0.05% cross-reactivity with recombinant mouse(rm)Galectin-1, rhGalectin-2, and rhGalectin-4 is observed.
