
Rabbit Anti-Human TP63 Monoclonal Antibody, clone CQ7149 (CABT-Z211R)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Immunogen	Synthetic peptide corresponding to p63 residues within aa580-680 of p63 was used as an immunogen.
Isotype	IgG
Source/Host	Rabbit
Species Reactivity	Human
Clone	CQ7149
Purification	ProA affinity purified IgG.
Conjugate	Unconjugated
Applications	IHC-P Recommended concentration: IHC-P: 1:100-1:200
Molecular Weight	77 kDa
Cellular Localization	Nucleus
Positive Control	Lung
Format	Liquid
Concentration	Lot specific
Size	100 µl

45-1 Ramsey Road, Shirley, NY 11967, USA
Email: info@creative-diagnostics.com
Tel: 1-631-624-4882 Fax: 1-631-938-8221

Buffer	PBS 59%, Sodium azide 0.01%, Glycerol 40%, BSA 0.05%.
Preservative	0.01% Sodium azide
Storage	Store at -20 °C. Avoid freeze/thaw cycles.
Ship	Wet ice

BACKGROUND

Introduction	p63 is a transcription factor related to the tumor suppressor gene p53 and play a critical role in the development of stratified epithelia by maintaining basal cell regenerative capacity and perhaps by playing a role in mediating ectodermal-mesenchymal interactions. In normal tissues, p63 expression is presented in the basal cells of stratified epithelia such as skin, ectocervix, esophagus, urothelium, and bronchi. p63 is also found in basal cells of glandular tissue such as prostate and breast and in lymphoid tissue. In tumor tissues, the p63 gene is amplified and the protein is overexpressed in primary lung and head and neck squamous cell carcinomas. Squamous cell carcinomas of the larynx, esophagus, skin, and cervix also express p63. p63 expression has also been documented in basal cell carcinomas of skin. However, some studies also show that p63 expressed in a subset of adenocarcinomas and large cell carcinomas of lung.In diagnostic pathology practice, p63 has been studied as a marker of basal cells to help in the diagnosis of ductal carcinoma in situ of the breast versus invasive carcinoma in fine-needle aspirates. Similarly, p63 has been tested as a marker to identify basal cells in the diagnostic work-up for prostatic cancer. Recently, some studies have suggested that p63 in combination with other markers may be used to help in differentiating squamous cell carcinomas from other tumor types in cases difficult to diagnose histologically.
Keywords	TP63; tumor protein p63; AIS; KET; LMS; NBP; RHS; p40; p51; p63

GENE INFORMATION

Gene Name	TP63
Entrez Gene ID	8626
UniProt ID	Q9H3D4
