| Product Overview | Mouse Monoclonal Antibody to Human CYP1A2 molecule |
| Antigen Description | CYP1A2 encodes a member of the cytochrome P450 superfamily of enzymes. The cytochrome P450 proteins are monooxygenases which catalyze many reactions involved in drug metabolism and synthesis of cholesterol, steroids and other lipids. The protein encoded by this gene localizes to the endoplasmic reticulum and its expression is induced by some polycyclic aromatic hydrocarbons (PAHs), some of which are found in cigarette smoke. The transcript from this gene contains four Alu sequences flanked by direct repeats in the 3' untranslated region. |
