

Pseudotyped GFP rSARS-CoV-2 Spike, Indian variant B.1.617.1 (Kappa) (COVG-KA1)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Product Overview	<p>SARS-CoV-2 Pseudovirus (Indian variant B.1.617.1 (Kappa)) are used to test the ability of serum, antibodies, and drugs to neutralize the infectivity of SARS-CoV-2 spike protein. Pseudovirus display antigenically correct spike protein pseudotyped on replication-incompetent virus particles that contain a heterologous lentiviral (HIV) core. Pseudovirus are capable of a single round of infection and carry a genome that expresses GFP optical reporter gene upon infection. Pseudovirus are produced in HEK293T cells using three separate plasmids, encoding the spike protein (G142D, E154K, L452R, E484Q, D614G, P681R, Q1071H), a lentiviral gag polyprotein, and a reporter gene. Pseudovirus are created using a second-generation lentiviral system with components that are highly unlikely to recombine to produce a fully infectious virus (requiring 3 separate recombination events to do so). However, lentiviruses are capable of genomic integration and Pseudovirus are derived from biological materials so should be handled with caution within a BSL2 or enhanced BSL2 laboratory environment.</p>
Species	SARS-CoV-2 (Indian variant B.1.617.1, Kappa)
Applications	<p>We recommended to use 10-30 uL pseudotyped virus per 1E+04 293T cells for in vitro assay. The titer will vary with each lot; the exact value is provided with each shipment.</p> <p>Due to differences in cell status, the best infection conditions and MOI should be determined by the end user. The virus can be diluted with cell culture medium if needed.</p>
Size	1 ml
Buffer	20% FBS/DMEM
Storage	<p>Store at -80°C. Multiple freeze/thaw cycles not recommended.</p> <p>When using the virus, transfer the virus from the -80 ° C refrigerator and melt it in an ice bath.</p>
Ship	Frozen on dry ice

BACKGROUND

Keywords

SARS-CoV-2 pseudovirus; SARS-CoV-2 pseudovirion; SARS-CoV-2 lentiviral pseudovirus; SARS-CoV-2 reporter virus particles; SARS-CoV-2 Spike Pseudotyped Virus; SARS-CoV-2 Pseudotyped Lentivirus
