

## EBV EA regions (aa 306 - 390) (DAG-T1131)

This product is for research use only and is not intended for diagnostic use.

### PRODUCT INFORMATION

<b>Product Overview</b>	E.coli derived recombinant. The protein contains the HHV-4 EA regions (306-390aa).
<b>Species</b>	EBV
<b>Conjugate</b>	Unconjugated
<b>Preservative</b>	None
<b>Storage</b>	Store at 2–8 °C

### BACKGROUND

<b>Introduction</b>	Epstein Barr virus (EBV) is a member of the herpes virus family and one of the most common human viruses. Most people become infected with EBV during their lives. Primary infections usually results in infectious mononucleosis (glandular fever) but the virus can also lay dormant in B lymphocytes and when reactivated become associated with more serious disease such as Burkitt's lymphoma, nasopharyngeal carcinoma and Hodgkin's disease.
<b>Keywords</b>	Epstain-Barr Virus EA; EBV EA; Epstain-Barr Virus; EBV
