

Human hemopexin reference serum (DAGA-647)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Antigen Description	Hemopexin (or naemopexin; HPX), also known as beta-1B-glycoprotein is a protein that in
	humans is encoded by the HPX gene and belongs to hemopexin family of proteins. Hemoglobin

and its scavenger protein hemopexin (Hx) associate with HDL and influence the inflammatory properties of HDL. In addition it can also be said that HDL from Hx-null mice is proinflammatory. Moreover, Hemopexin deficiency is associated with various other inflammatory diseases such

as septic shock and experimental autoimmune encephalomyelitis.

Specificity	Human
Conjugate	Unconjugated

Concentration Batch dependent - please inquire should you have specific requirements

Preservative 0.1% Sodium Azide

Liquid

1 ml

Storage Frozen -20°C
