

# Anti-RIPK1 monoclonal antibody, clone FQS5790 (DCABH-1743)

This product is for research use only and is not intended for diagnostic use.

## PRODUCT INFORMATION

<b>Product Overview</b>	Rabbit monoclonal to RIP
<b>Antigen Description</b>	Essential adapter molecule for the activation of NF-kappa-B. Following different upstream signals (binding of inflammatory cytokines, stimulation of pathogen recognition receptors, or DNA damage), particular RIPK1-containing complexes are formed, initiating a limited number of cellular responses. Upon TNFA stimulation RIPK1 is recruited to a TRADD-TRAF complex initiated by TNFR1 trimerization. There, it is ubiquitinated via Lys-63-link chains, inducing its association with the IKK complex, and its activation through NEMO binding of polyubiquitin chains.
<b>Immunogen</b>	Recombinant fragment corresponding to Human RIP aa 300-450 (internal sequence).
<b>Isotype</b>	IgG
<b>Source/Host</b>	Rabbit
<b>Species Reactivity</b>	Human
<b>Clone</b>	FQS5790
