

Anti-ampicillin monoclonal antibody, clone HQC3 (DMAB21485)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Product Overview	Mouse Anti-ampicillin Monoclonal Antibody
Target	ampicillin
Isotype	IgG1
Source/Host	Mouse
Species Reactivity	N/A
Clone	HQC3
Conjugate	Unconjugated
Applications	ELISA, LFIA
Size	1 mg
Buffer	PBS, pH 7.4, 0.1 % sodium azide (NaN ₃)
Preservative	0.1% Sodium Azide
Storage	Store at -20 °C

BACKGROUND

Introduction	Ampicillin is a beta-lactam antibiotic that has been used extensively to treat bacterial infections since 1961. Ampicillin is part of the aminopenicillin family and is roughly equivalent to its successor, amoxicillin in terms of spectrum and level of activity. It can sometimes result in reactions that range in severity from a rash (in the case of patients that may unwittingly have
--------------	---

mononucleosis) to potentially lethal allergic reactions such as anaphylaxis. However, as with other penicillin drugs, it is relatively non-toxic and adverse effects of a serious nature are encountered only rarely.
