
Anti-HFRSV Monoclonal antibody, Clone C958M (DMAB3484)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Specificity	Specific for HFRS Virus. Strains: Dobrava, Puumala, Hanta and Seoul
Target	HFRSV
Immunogen	Inactivated virus particles
Isotype	IgG2b
Source/Host	Mouse
Species Reactivity	HFRSV
Clone	C958M
Affinity Constant	Not determined
Purification	95% pure (SDS-PAGE). Protein G chromatography
Conjugate	Unconjugated
Applications	Suitable for use in ELISA. Each laboratory should determine an optimum working titer for use in its particular application. Other applications have not been tested but use in such assays should not necessarily be excluded. Recommended pairs for sandwich immunoassay: • **Capture** DMAB3484 • **Detection** DMAB3483

Tel: 1-631-624-4882 Fax: 1-631-938-8221

	Suggested pair for testing (Capture - Detection): DMAB3484 - DMAB3483
Format	Purified, Liquid
Concentration	Lot specific
Size	1 mg
Buffer	PBS, pH 7.4
Preservative	0.1% Sodium Azide
Storage	Store at 2-8°C.

BACKGROUND

Introduction	Hantaviruses(family Bunyaviridae, genus Hantavirus) are rodent-borne, zoonotic (acquiredfrom animals), enveloped RNA viruses, and include the causative agents ofhaemorrhagic fever with renal syndrome (HFRS). The viruses that cause HFRSinclude Hanta, Dobrava, Seoul, and Puumala. Dobrova and Hanta viruses cause amore severe HFRS with fever, haemorrhage, and renal failure, and a mortalityrate of up to 15%. The mildest form of HFRS is caused by Puumala virus.
