RHA™ anti-Chlorpyrifos monoclonal antibody, clone CPF (HMABPY087)

This product is for research use only and is not intended for diagnostic use.

**PRODUCT INFORMATION**

**Antigen Description**
Chlorpyrifos (IUPAC name: O,O-diethyl O-3,5,6-trichloropyridin-2-yl phosphorothioate) is a crystalline organophosphate insecticide, acaricide and miticide. It was introduced in 1965 by Dow Chemical Company and is known by many trade names (see table), including Dursban and Lorsban. It acts on the nervous system of insects by inhibiting acetylcholinesterase.

Chlorpyrifos is moderately toxic to humans, and exposure has been linked to neurological effects, persistent developmental disorders and autoimmune disorders. Exposure during pregnancy retards the mental development of children, and most home use was banned in 2001 in the U.S. In agriculture, it is "one of the most widely used organophosphate insecticides" in the United States, according to the United States Environmental Protection Agency (EPA), and before being phased out for residential use was one of the most used residential insecticides.

**Immunogen**
Chlorpyrifos [KLH]

**Isotype**
IgG

**Source/Host**
Mouse

**Species Reactivity**
N/A

**Clone**
CPF

**Purification**
Purified with Absolute Mag™ Protein A Agarose (WHM-L086)

**Conjugate**
Unconjugated

**Applications**
ELISA, LFIA

**Size**
1 mg

**Buffer**
0.01M pH7.4 PBS

**Preservative**
None

**Storage**
Shipped at 4°C. Upon delivery aliquot and store at -20°C. Avoid freeze / thaw cycles.
